Ankit Rana

Haryana, India | ankitrana210704@gmail.com | +91-8814073730 | LinkedIn | GitHub | LeetCode | GFG | CodeChef

Summary

Final-year CS undergraduate (CGPA 9.20) with **1500+ DSA problems solved** (LeetCode peak rating 1860) and hands-on full-stack experience from a 3-month internship. Built and shipped production MERN web applications with authentication, real-time features and third-party integrations. Seeking Software Development Engineer roles.

Experience

Full Stack Developer Intern **May 2026 – July 2026**

PropStory | Gurgaon, Haryana

- Developed and shipped responsive, production real-estate project websites for clients (**Sattva Songbird, Amolik, Embassy Verde, GuruKrupa Realcon**) using React.js, Node.js, Express.js and MongoDB.
- Built and maintained backend REST APIs with JWT authentication, CRUD operations and MongoDB schemas for lead capture and project data.
- Debugged and resolved frontend, backend and database issues across live projects, improving stability and page responsiveness.
- Integrated third-party services and worked in an Agile team using Git/GitHub for version control and code reviews.
- Building **PropBot Pro**, an AI-powered real-estate CRM and lead-management SaaS for agencies (see Projects).

Projects

PropBot Pro: AI Real Estate CRM & Lead Management SaaS *PropStory*

Node.js, TypeScript, React, PostgreSQL, pgvector, BullMQ, Redis

- Built a multi-tenant CRM for real-estate companies with role-based access (admin, sales manager, agent) and JWT authentication.
- Integrated an AI chatbot with **RAG** (pgvector) that answers buyer property queries from uploaded knowledge-base documents.
- Automated the lead pipeline (chatbot, lead saved, email alert, CRM) with deduplication through a **BullMQ** delivery-jobs queue, and batched email automation with an env kill-switch.
- Integrated the **WhatsApp Business API** for inbound buyer chats with AI auto-replies and human handoff, and **Google Calendar OAuth 2.0** sync for automatic appointment creation.

Intern Portal | *React, Node.js, Express, MongoDB, Socket.IO, Puppeteer, Gemini AI* GitHub | Live Demo

- Built a full-stack internship aggregator with **23 REST endpoints, 5 Mongoose models and 14 responsive pages**, covering auth, job discovery, saved jobs, profiles and resume upload.
- Automated scraping of Internshala and Unstop (up to 50 pages per run) with Puppeteer and `node-cron` every 12 hours, normalizing listings into one schema and merging them with live jobs from the JSearch API.
- Made scraping resilient to HTML changes by extracting listings with **Gemini 2.5 Flash** and a strict JSON schema; added retry with backoff on 429 rate limits and a guard that keeps existing data when a run returns nothing.
- Implemented secure auth with JWT in httpOnly cookies, bcrypt-hashed passwords, expiring OTPs and email verification via Nodemailer.
- Built real-time chat with Socket.IO rooms (join, broadcast, live online-user count), persisting messages in MongoDB so history survives reloads.

QuickStay: Hotel Booking Platform | *React, Node.js, Express, MongoDB, Clerk, Razorpay, Cloudinary* GitHub | Live Demo

- Built a MERN booking platform with **39 REST APIs** across guest and hotel-owner flows, with role-based access control for 3 roles (user, hotel owner, admin).
- Implemented date-overlap availability checks with an optimistic recheck to prevent double bookings, plus a cron job that auto-expires unpaid bookings after 15 minutes.
- Integrated Razorpay (test mode) with order creation, HMAC signature verification and refunds on cancellation, and Cloudinary image uploads.
- Secured the API with JWT access and refresh-token rotation (reuse detection), rate limiting, input sanitization and Helmet; found and fixed an auth bypass and a privilege-escalation issue in a self-audit.
- Added automated tests with a GitHub Actions CI pipeline, and reduced the frontend bundle to ~134 KB gzipped.

Skills

Languages: Java, JavaScript, TypeScript, Python, SQL
Frontend: React.js, HTML5, CSS3, Tailwind CSS
Backend: Node.js, Express.js, REST APIs, JWT Authentication, Clerk, Socket.IO (WebSockets), Razorpay, BullMQ, OAuth 2.0, Nodemailer
Databases: MongoDB, PostgreSQL (pgvector), Redis, MySQL
Tools: Git, GitHub, GitHub Actions (CI), Postman, Cloudinary, Puppeteer, Gemini API
Core CS: Data Structures & Algorithms, OOP, DBMS, Operating Systems, Computer Networks

Education

Maharaja Agrasen Institute of Technology (MAIT) *Sep 2023 – June 2027 (Expected)*

B.Tech in Computer Science and Technology | CGPA: 9.20/10

Karnal International School *2023*

Senior Secondary (Class XII) | Percentage: 89.6%

Achievements

- Solved **1500+ DSA problems** across **LeetCode (1000+, Peak Rating: 1860)** and GeeksforGeeks.
- Participated in national-level hackathons including **Smart India Hackathon (SIH)**, **EY Techathon**, **Odoo Hackathon** and **HackWithMAIT 5.0**.
